

CrowdMaster 780 Barricade

Heavy Duty Crowd Control

PRODUCT SPEC SHEET

The CrowdMaster 780 is made from heavy gauge steel and hot-dip galvanized inside and out, so it stands up to the weather season after season. A 1.5"/38mm steel tube frame carries 1/2"/13mm steel tube uprights, each fully inserted into the frame before welding for a rigid, long-lasting build. Pick the base to suit the site: a bridge base handles uneven ground such as grass, while a flat base sits low on smooth surfaces such as tarmac, where keeping trip hazards to a minimum matters most. Units connect with the industry standard hook and half-loop interlock.
