

The QueuePro 400 is designed for creating very large queue systems or long cordons. With belt lengths up to 35' the QueuePro 400 is the equivalent of 4 stanchions with industry standard 7.5' belts. Fewer stanchions lowers purchase cost, reduces the labor required for set up and decreases the space required for storage. The belt mechanism is housed inside the 4" / 100mm diameter post giving the QueuePro 400 a sleek, elegant look. The QueuePro 400 features a braking system for slow, safe belt retraction and a belt lock to prevent accidental belt release. The base is fitted with a full circumference rubber floor protector.

Full Circumference Floor Protector
